Front-End Developer | Aspiring Software Engineer | Focused on .NET and Windows Forms Development

Qualification Summary

Aspiring Software Engineer with hands-on experience in **Front-End Web Development and Desktop Application Programming**. Currently pursuing a **Bachelor's degree in software engineering (Bahria University, Karachi)**. Skilled in **HTML, CSS, Bootstrap, C#, and .NET Windows Forms**. Currently learning and gaining practical experience in **SQL Server** for database design and management. Passionate about building efficient, user-friendly software solutions and continuously improving technical skills through real-world projects.

Key Skills

- ✓ **Front-End Development:** HTML, CSS, JavaScript, Bootstrap
- ✓ **Desktop Application Development:** C#, Windows Forms Application Development (.NET)
- ✓ **Back-End Development:** C#, SQL Server, File Handling
- ✓ **Operating Systems:** Windows, Linux

Projects

Intelligent ChatBot

semester-end project at University – 2025

Technologies: HTML, CSS, JavaScript

An Intelligent Chatbot built with **HTML, CSS, and JavaScript** using the Gemini 2.5 Flash API. It enables real-time conversations with a responsive and user-friendly interface. The chatbot includes features such as **typing animations, emoji picker, image and file upload previews**, and dynamic message rendering for a smooth and interactive user experience. It is designed to simulate natural conversations and enhance user engagement through fast and intelligent AI responses.

SuperMarket Management System

semester-end project at University – 2026

Technologies: C#, .NET Framework (Windows Forms App), File Handling

A desktop Super Market Management System for managing inventory, sales, billing, and customer records. It includes file handling for data storage, with role-based access for **admin and sellers** to ensure secure operations. The system follows a scalable design and implements **Factory design Pattern** for login and **Decorator design Pattern** for billing, improving flexibility and maintainability. It is designed for future enhancement with possible **SQL Server** integration to replace file handling for more robust data management.

Car Parking Management System

semester-end project at University – 2026

Technologies: C, Linux Operating System

Designed a command-line based car parking management system in C for **Linux**, implementing **core Operating System concepts**. The system manages vehicle entry and exit, parking slot allocation, and billing using **file handling** and system-level operations. It follows a structured approach with modular programming in C to ensure efficient data management and smooth execution of parking operations. This project demonstrates strong understanding of **file handling, process management, and Linux-based development**.

Education

Bachelor in Software Engineering

Bahria University, Karachi

2024 — present

Interest

I am interested in **UI Design** and enjoy creating visually appealing and user-friendly interfaces. I also enjoy editing videos, designing posts using tools like **CapCut and InShot**, mainly for social media content which helps me express creativity and enhance my editing skills. I am always curious and motivated to learn new tools that combine both technology and creativity.
