

AQSA FAROOQ

Front-End Developer | Aspiring Software Engineer | .NET & Windows Forms Development

Karachi, Pakistan | +92 312 2562910 | aqsaf4422@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

QUALIFICATION SUMMARY

Aspiring Software Engineer with hands-on experience in front-end web development and desktop application programming. Currently pursuing a Bachelor's degree in Software Engineering at Bahria University, Karachi. Skilled in HTML, CSS, Bootstrap, JavaScript, C#, and .NET Windows Forms, Git & GitHub with growing expertise in SQL Server for database design and management. Passionate about building efficient, user-friendly software solutions and continuously strengthening technical skills through real-world, hands-on projects.

KEY SKILLS

- **Front-End Development:** HTML, CSS, JavaScript, Bootstrap
- **Desktop Application Development:** C#, Windows Forms Applications (.NET)
- **Back-End Development:** C#, SQL Server, File Handling
- **Operating Systems:** Windows, Linux

PROJECTS

Flower Shop Website | HTML, CSS, JavaScript

A responsive Flower Shop website built with HTML, CSS, and JavaScript, featuring a modern UI, product collections, responsive design, and an elegant, smooth user experience across devices.

Intelligent ChatBot | Semester-End Project, University — 2025 | HTML, CSS, JavaScript, Gemini 2.5 Flash API

An intelligent chatbot built with HTML, CSS, and JavaScript using the Gemini 2.5 Flash API, enabling real-time conversations through a responsive, user-friendly interface. Features include typing animations, an emoji picker, image and file upload previews, and dynamic message rendering, simulating natural conversations and enhancing user engagement through fast, intelligent AI responses.

SuperMarket Management System | Semester-End Project, University — 2026 | C#, .NET Framework (Windows Forms), File Handling

A desktop Super Market Management System for managing inventory, sales, billing, and customer records, using file handling for data storage with role-based access for admins and sellers to ensure secure operations. Implements the Factory design pattern for login and the Decorator design pattern for billing, improving flexibility and maintainability, and is designed for future SQL Server integration to replace file handling with more robust data management.

Car Parking Management System | Semester-End Project, University — 2026 | C, Linux Operating System

A command-line car parking management system built in C for Linux, applying core operating system concepts. Manages vehicle entry and exit, parking slot allocation, and billing through file handling and system-level operations, using modular programming for efficient data management and smooth execution — demonstrating strong understanding of file handling, process management, and Linux-based development.

EDUCATION

Bachelor in Software Engineering — 2024 – Present

Bahria University, Karachi

INTERESTS

Excited by the intersection of AI and front-end development, and how intelligent features can transform user experience. Continuously exploring new tools and design trends to build interfaces that feel both smart and intuitive.
